Question No. 1

You have a cloud-based Dynamics 365 Finance production environment.

You need to access the data to create Microsoft Power BI reports for the business.

What should you use?

- **A.** Power BI embedded
- **B.** views
- **C.** aggregate dimensions
- **D.** data entities

Answer: A

Question No. 2

A company uses Dynamics 365 Finance.

You need to migrate all custom report artifacts from a development environment to a cloud-hosted Tier-1 test environment that has Visual Studio installed.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- **A.** Apply a deployment package
- **B.** Export the project as an axppfile
- **C.** Create a deployment package
- **D.** Import the project into a cloud-hosted environment from an axpp file and ensure that the Overwrite Elements option is selected

Answer: B, D

Question No. 3

You are a Dynamics 365 Finance developer. You have the following Extended Data Types (EDTs):

Name	Comments
AccountBase	Root EDT
AccountId	Derives from AccountBase

You plan to modify the EDT properties by using an extension.

You need to determine which operations can be performed.

Which operation is possible?

- **A.** Create an extension for AccountBase and decrease the field size.
- **B.** Create a derived EDT for AccountBase and increase the field size.
- **C.** Create an extension for AccountId and increase the field size.
- **D.** Create an extension for AccountBase and modify the Form Help property.

Answer: D

Question No. 4

You create a new class.

Class compilation must fail if a specific method in the source code is called.

You need to mark the class with the appropriate attribute.

Which attribute should you use?

- **A.** SysAppSecurityAttribute
- **B.** SysTestCategory
- **C.** SysObsoleteAttribute
- **D.** SysAttribute

Answer: C

Question No. 5

You are a Dynamics 365 Finance developer. You make changes to an existing custom class.

The code comparison tool shows version conflicts between your version and the latest checked-in version of the custom class.

In Visual Studio, you open the Source Control Explorer. You locate the latest changeset for the class and you open the changeset in Team Explorer.

You need to compare the latest code that is in source control with the code that you created.

Which option should you use?

- **A.** Compare with Workspace Version
- **B.** Compare with Previous Version
- **C.** View History
- **D.** Compare with Latest Version

Answer: D
